Ubuntu VMs on demand for any workstation

Get an instant Ubuntu VM with a single command. Multipass can launch and run virtual machines and configure them with cloud-init like a public cloud.

Install now

Cloud-style VMs at your fingertips

Spin up cloud instances with a single command

Launch instances of Ubuntu and initialise them with cloud-init metadata in the same way you would on AWS, Azure, Google, IBM and Oracle. Simulate your own cloud

Windows
MacOS
Install Multipass on Windows
1. Download Multipass for Windows
You need Windows 10 or 11, the minimal version is 1809 ("October 2018 Update").
2. Ensure your network is private
Make sure your local network is designated as private, otherwise Windows prevents Multipass from starting.
3. Run the installer
You need to allow the installer to gain Administrator privileges.
How to launch LTS instances
The first five minutes with Multipass let you know how easy it is to have a lightweight cloud handy. Let's launch a few LTS instances, list them, run a command, use cloud-init and clean up old instances to start.

Windows
MacOS
Install Multipass on MacOS
1. Download Multipass for MacOS
Alternatively, see our documentation for instructions on how to install using brew.
2. Run the installer
You will need to run the installer in an account with administrator privileges.
How to launch LTS instances
The first five minutes with Multipass let you know how easy it is to have a lightweight cloud handy. Let's launch a few LTS instances, list them, run a command, use cloud-init and clean up old instances to start.
Launch an instance (by default you get the current Ubuntu LTS):
$ multipass launch --name foo

How to launch LTS instances
The first five minutes with Multipass let you know how easy it is to have a lightweight cloud handy. Let's launch a few LTS instances, list them, run a command, use cloud-init and clean up old instances to start.
Launch an instance (by default you get the current Ubuntu LTS):
$ multipass launch --name foo
Run commands in that instance, try running bash (logout or ctrl-d to quit):
$ multipass exec foo -- lsb_release -a
See your instances:
$ multipass list
Stop and start instances:
$ multipass stop foo bar
$ multipass start foo
Clean up what you don't need:
$ multipass delete bar
$ multipass purge

Clean up what you don't need:
$ multipass delete bar
$ multipass purge
Find alternate images to launch:
$ multipass find
Pass a cloud-init metadata file to an instance on launch. (See Using cloud-init with Multipass for more details):
$ multipass launch -n bar --cloud-init cloud-config.yaml
Get help:
$ multipass help
$ multipass help <command>
Don't forget you still have the "foo" instance running. To learn more about Multipass keep reading, go to the docs, or join the discussion and get involved.

Multipass Setup
Welcome to the Multipass Setup Wizard
Multipass: Cloud VMs at your fingertips.
Welcome to the Multipass installer. This will set up Multipass on your computer.
Multipass gives you cloud VMs in seconds. Just run `multipass launch` and it'll do all the setup for you.
For more information, visit https://canonical.com/multipass/
You will be guided through the steps necessary to install this software.
